Connecting to ihnyc-device

The ihnyc-device network is for wi-fi enabled devices that cannot connect using the username and password authentication on ihnyc-secure. You must register your device through the device registration portal before it can be joined on the ihnyc-device network. The portal is accessible only after connecting successfully to the ihnyc-secure Wi-Fi network on another device.

1. Open the web browser and go to the site https://wifi.ihouse-nyc.org/device-registration

2. On the registration portal, enter in the same username and password used for accessing ihnyc-secure.

   a. Enter in your username as first name, period, last name (example: john.doe)
   b. Enter your entry ID as your password
Wi-Fi Connectivity via Windows or Mac

3. A list of currently registered devices under your account will appear. To register a new device to be used on ihnyc-device, choose Register another device.

4. Enter in the Device MAC address, a unique 12 character identifier, typically found in the network settings of your device, or sometimes printed on the outside of your device. Click Register to accept.

5. Once registered, a confirmation message will appear and your device will be show in the list of registered devices.
Wi-Fi Connectivity via Windows or Mac

6. After you have successfully registered your device, you can now connect to the ihnyc-device Wi-Fi Network. Choose the ihnyc-device Wi-Fi network from the list of available networks.

7. Enter in the password for the ihnyc-device network which is **cleveland**, all lowercase.

8. Once your access has been authorized, the Wi-Fi network will show as connected.

In addition to registering devices on your account, you can also unregister a device from your account by choosing the Unregister button next to the device that you want to unregister. A confirmation message will appear and choose Unregister to finish removing the device from your account.
